

## AP COMPUTER SCIENCE A - HELLO PROGRAM

```
public class Hello {
```

```
    public static void main ( String [] arg ) {
```

```
        System.out.println("Hello");
```

```
        return;
```

```
    }
```

```
    public Hello () {
```

```
    }
```

```
}
```

program's main method

prints to the console

return execution to the  
operating system

null constructor (will talk about later)

All java programs must be contained in classes

things that end with semi-colons are called statements
