

## AP COMPUTER SCIENCE A – THE `String [] arg` OBJECT – CLASS WORK

Write a class `ArgTest` which does the following:

**1)** Only runs to completion if it is invoked with two arguments, *e.g.*, `java ArgTest Ricky Lucy`.

**2)** If it is not invoked with two arguments, then the program should print out something like

Usage:

```
java ArgTest arg[0] arg[1]
```

and return.

**3)** If it is invoked with, *e.g.*, `java ArgTest Ricky Lucy`, then it should print out, *e.g.*,

```
Ricky and Lucy
```
