

Javadoc In-Code Comment Commands

1) `@param <T> description`

Description of generic type parameter T.

2) `@param p description`

Description of parameter p.

3) `@return description`

Description of return value.

4) `@see ClassName`

Makes a link to the documentation file for class *ClassName*.

Javadoc Console Command

```
javadoc -d directoryName *.java
```

Load all `.java` files in the current directory (or folder) into the `javadoc` program. The documentation files are put into directory (or folder) *directoryName*.

HTML Tags for use in Javadoc In-Code Comment Blocks

This list is by no means all-inclusive. In fact, most HTML tags can be used in the in-code comment blocks.

1) `< >`

The less than and greater than symbols, *e.g.*,

`<T>` produces `<T>`

2) `
`

Line-feed.

3) `<code> ... </code>`

Text will be formatted like text in a program, *i.e.*, with monospaced font, *e.g.*, Courier.

4) `<i> ... </i>`

Italics.

5) `<p>`

Paragraph break

6) `<pre> ... </pre>`

Pre-formatted text, *e.g.*,

```
<pre>
Steve
Dave
</pre>
```

produces

```
Steve
Dave
```
